-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Objections***

Claims 5-6 are objected to under 37 CFR 1.75(c) as being in improper form because they are multiple dependent claims. See MPEP § 608.01(n).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Noda et al. (6,146,411).

As to claims 1-5, Noda et al. disclose a catheter for topical cooling composed of a high thermal conductivity that has the inner space to circulate a heat-cooling medium therein but has no hole connecting to the outside (closed loop type, wherein it is inserted into an organ or a tissue of a mammal including a human and placed therein thereby to topical cool it selectively and continuously; wherein a cooling water or gas is circulated as a heat-cooling medium (col. 1, lines 10-42, col. 3, line 54-col. 5, line 35).

Further to claims 6-9, Noda et al. disclose a device comprising a reservoir, pump, heat exchanger and catheter as claimed.

Note that the claimed location or position of the catheter is merely intended use and the catheter of Noda et al. is capable of being positioned in any of the claimed locations.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Whitebrook et al. (US2003/0060864) disclose a heating/cooling system for indwelling catheters; Stull (7,077,825) discloses a method for gastric cooling using a balloon catheter; Keller et al. (6,610,083) disclose multiple lumen heat exchange catheters and each of the above anticipate claims 1-9.
